

[2, 3, 1]

[4]

align
trailing

```
graph LR; A([2, 3, 1]) --> C(align trailing); B([4]) --> C;
```

The diagram illustrates a process where two separate inputs are combined. On the left, there are two light blue rounded rectangular boxes. The top box contains the array `[2, 3, 1]` and the bottom box contains the array `[4]`. Arrows from both boxes point towards a larger light blue rounded rectangular box on the right. This box contains the text `align` and `trailing` stacked vertically, representing the operation performed on the inputs.
