

`[-8, -1, 0, 3, 7]`

`[1, 1, -2, 6, 7]`

`add qint4`

```
graph TD; A["[-8, -1, 0, 3, 7]"] --> C["add qint4"]; B["[1, 1, -2, 6, 7]"] --> C;
```

The diagram illustrates a data flow where two separate arrays of five integers each are combined into a single operation. The first array, `[-8, -1, 0, 3, 7]`, and the second array, `[1, 1, -2, 6, 7]`, are shown in light blue boxes at the top. Arrows from both boxes point down to a light orange box labeled `add qint4`, indicating that the elements of both arrays are being added together.
