

x: i8[4]

y: i8[4]

qadd

```
graph LR; A(x: i8[4]) --> C(qadd); B(y: i8[4]) --> C;
```

The diagram illustrates a data flow where two inputs, 'x: i8[4]' and 'y: i8[4]', are combined via a 'qadd' operation. The inputs are represented by light blue rounded rectangles, and the operation is represented by a light orange rounded rectangle. Arrows point from each input box to the 'qadd' box.
