

`x: i8[4]`

`y: i8[4]`

`qadd`

```
graph LR; A([x: i8[4]]) --> C([qadd]); B([y: i8[4]]) --> C;
```

The diagram illustrates a data flow where two input nodes, 'x: i8[4]' and 'y: i8[4]', are combined into a single output node 'qadd'. The input nodes are light blue ovals, and the output node is a light orange rounded rectangle. Arrows point from each input node to the output node.
