

[2, 3, 1]

[4]

align
trailing

```
graph LR; A([2, 3, 1]) --> B(align trailing); C([4]) --> B;
```

The diagram illustrates a process where two input arrays, [2, 3, 1] and [4], are processed by a common operation labeled 'align trailing'. The array [2, 3, 1] is contained within a light blue rounded rectangle, and the array [4] is contained within a light blue circle. Both of these shapes have arrows pointing towards a larger light blue rounded rectangle on the right, which contains the text 'align trailing'.
