

`x: i8[4]`

`y: i8[4]`

`qadd`

```
graph LR; A["x: i8[4]"] --> C["qadd"]; B["y: i8[4]"] --> C;
```

The diagram illustrates a data flow where two inputs, `x: i8[4]` and `y: i8[4]`, are combined via a `qadd` operation. The inputs are represented by light blue rounded rectangles, and the operation is represented by a light orange rounded rectangle. Arrows point from each input box to the operation box.
