

a) *Mods & Graphs*

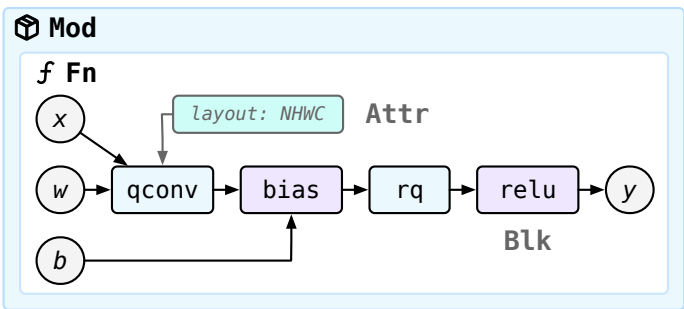

```
mod extension
use base
use ir
```

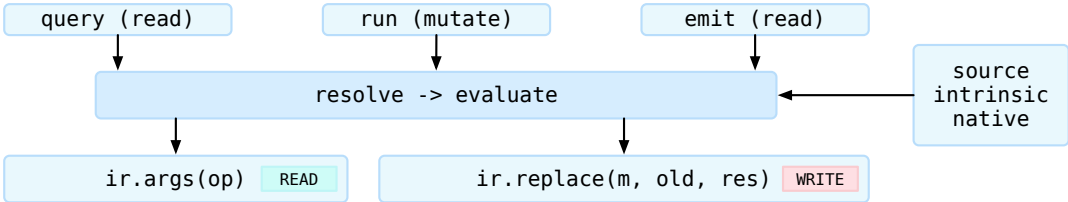

entry signatures:

```
fn transform(m: Mod) -> bool
fn analyze(m: Mod) -> dict
```

```
mod extension
use tensor
```

b) *Typed calls*

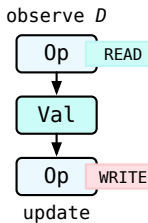

c) *Runtime state*

Evaluator caches

|              |                                   |
|--------------|-----------------------------------|
| decoded body | (store, fn, generation, revision) |
| query        | (K, result, D)                    |
| stage        | (K, D, W)                         |

Typed graph store

d) *Checked mutation*
